Key Insights

- Age 1 trucks are the most numerous in the fleet, with 35 trucks which is over 3x the number of Age 4 trucks having 10 trucks in the fleet.
- Across all years, the fleet recorded a fuel efficiency ratio of 99% with even our worst truck just about 6% below the fleet ratio.
- With a correlation (r) of 0.45, idle hours and fuel consumption show a moderate positive relationship. This means that trucks with more idle hours per 100 miles burn more gallons per 100 miles.
- Our most productive route is the Columbus —> Portland route with an RPM of $3.605. This RPM is driven jointly by the high base rate per mile(2.69) and fuel surcharge of 34%. The Seattle —> Charlotte route also boasted high surcharge of 34% but fell short in base rate (2.47).
